

The Marcus' Miniatures 3D Print Service Info-sheet

Here we would like to list some general information about our 3D printing service. We recommend reading them carefully to avoid misunderstandings.

General

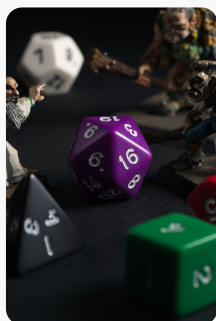

Please take a close look at our work, each company works with its own techniques or devices. If you have any questions, please just let us know.

Delivery

Our objects come in 2 possible deliveries:

1. 3D print cleaned but supports not removed
2. 3D print cleaned and support structures removed.

What we need

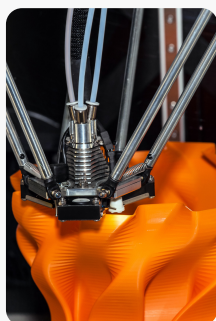

We need 3D printable data, either as an STL or as an OBJ file. Then simply send it to our specified email address via email or we transfer.

No 3D design yet?

3D Designing

If you don't have a 3D design yet, you can have simple objects designed by us. For more complex objects, we work together with the best designers in the field of miniatures as well as industry.

It should be noted that 3D design is a very time-consuming thing and therefore clear communication is necessary beforehand. We are not willing to deliver inferior work and ask for your understanding that low-budget design is unfortunately not an option.

All information and ideas should come to us collectively, this must always be done in writing. Subsequent information (if it is not already too late) should also be sent to us. This is the only way we can prevent any communication problems.

Resin-Print

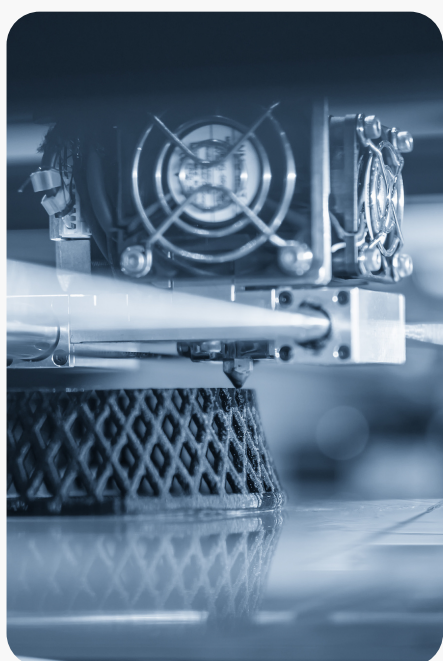

High-resolution resin 3D printing is our specialty, miniatures, highly detailed model making, industrial prototypes and much more come to our customers in the highest resolution and precision.

We use both laser and UV technology, bottom up and bottom down processes.

Filament Print

Functional, resilient and technical 3D printing with FDM technology from the most modern devices offer endless possibilities. All types of plastic filament, including TPU, flex, nylon, ABS, wood and carbon can be printed, offering the right material for every use.

Production Quantity

From individual prototypes to series of up to 5000 pieces are possible in both the FDM and the resin area.

Thanks to our centrally located printing farm, we can use and produce the right process for all needs.

Prices

Prices are always to be requested separately for 3D printing, we already produce models or objects from €2.99, but almost all models differ greatly and are therefore calculated explicitly.
